Signature _____

This exam contains 10 pages (including this cover page) and 9 questions.
Total of points is 108.

- Check your exam to make sure all 10 pages are present.
- You may use writing implements and a single handwritten sheet of 8.5”x11” paper.
- NO CALCULATORS.
- Show all work, clearly and in order, if you want to get full credit. I reserve the right to take off points if I cannot see how you arrived at your answer (even if your final answer is correct).
- Good luck!

4	12	
5	12	
6	12	
7	12	
8	12	
9	12	
Total:	108	

1. (12 points) State the definition of an ideal of a ring. Find all the ideals in $\mathbb{Z}/6\mathbb{Z}$.

I is an ideal of R iff

① I is an additive subgroup

② $\forall r \in R, a \in I, a \cdot r \in I$

$\mathbb{Z} \rightarrow \mathbb{Z}/6\mathbb{Z}$.

$\{\text{ideals of } \mathbb{Z}/6\mathbb{Z}\} \leftrightarrow \{\text{ideals of } \mathbb{Z} \text{ containing } 6\mathbb{Z}\}$.

(a) contains (b) iff $b = a \cdot b$.

So all the ideals are

$(0), (\bar{2}), (\bar{3}), \mathbb{Z}/6\mathbb{Z}$

(or written as $(0), (2), (3), (1)$)

2. (12 points) Find the units in $\mathbb{Z}/9\mathbb{Z}$.

An element $x \in \mathbb{Z}/9\mathbb{Z}$ is a unit iff x is not a zero divisor.
which means $(x, 9) = 1$.

So all the units are

1, 2, 4, 5, 7, 8.

3. (12 points) Is $(i+4)$ a maximal ideal in $\mathbb{Z}[i]$? Why?

$$\begin{aligned}
 \mathbb{Z}[i] / (i+4) &= \mathbb{Z}[x] / (x^2+1) / (x+4) \\
 &= \mathbb{Z}[x] / (x+4, x^2+1) \\
 t=x+4 &= \mathbb{Z}[t] / (t, (t-4)^2+1) \\
 &= \mathbb{Z}[t] / (t, t^2-4t+17) \\
 &= \mathbb{Z}[t] / (t, 17) \\
 &= \mathbb{Z} / 17\mathbb{Z}
 \end{aligned}$$

17 is a prime number.

So $\mathbb{Z} / 17\mathbb{Z}$ is a field.

So $(i+4)$ is a maximal ideal

4. (12 points) What are the maximal ideals of $\mathbb{C}[x, y]/(xy, (x-2)(y-1))$?

Hilbert's Nullstellensatz

\Rightarrow maximal ideals of

$(\mathbb{C}[x, y]/(xy, (x-2)(y-1)))$ corresponds
to

$$\begin{cases} xy = 0 \\ (x-2)(y-1) = 0 \end{cases}$$

$$\begin{cases} x = 0 & \text{or } y = 0 \\ x = 2 & \text{or } y = 1 \end{cases}$$

so $x = 0, y = 1$ or $x = 2, y = 0$

Maximal ideals are $(x, y-1)$
 $(x-2, y)$.

5. (12 points) Find the kernel of the homomorphism $\mathbb{C}[x, y] \rightarrow \mathbb{C}[t]$ determined by $x \mapsto t^2 + t, y \mapsto t - 1$.

Use change of variables.

$$x = x, \quad y = y + 1.$$

$$\text{then } \varphi(x) = t^2 + t, \quad \varphi(y) = t.$$

$$\varphi(x - y^2 - y) = 0.$$

$$\text{(Claim } \ker \varphi = (x - y^2 - y))$$

$$\text{If } f(x, y) \in \ker \varphi.$$

$$f(x, y) = q(x, y) \cdot (x - y^2 - y) + r(x, y)$$

$$\deg_x r(x, y) < \deg_x (x - y^2 - y) = 1.$$

$$\text{So } r(x, y) = r(y)$$

$$\varphi(f) = 0 \Rightarrow \varphi(r(x, y)) = 0 \Rightarrow r(t) = 0$$

$$\Rightarrow r(x, y) = 0. \quad \text{So } f(x, y) \in (x - y^2 - y)$$

6. (12 points) Give an example of irreducible polynomial $f(x)$ of degree 2 in $\mathbb{F}_3[x]$. Use $f(x)$ to construct an example of a field consisting of 9 elements.

$$f(x) = x^2 + ax + b.$$

$f(x)$ is irreducible iff $f(x)$ does not have a divisor of degree 1.

$$\text{So } f(x) \neq (x-m)(x-n)$$

In other words $f(m) \neq 0$ for any $m \in \mathbb{F}_3$.

$$\text{choose } f(x) = x^2 + a.$$

$$m = 0 \quad 1 \quad 2$$

$$m^2 = 0, 1, 1.$$

so we can choose $a = 1$.

$$f(x) = x^2 + 1 \text{ is irreducible}$$

$\mathbb{F}_3[x]/(f(x))$ is a field with 9 elements

(Because $f(x)$ is irreducible, $\mathbb{F}_3[x]$ is PID,
so $(f(x))$ is a maximal ideal)

7. (12 points) State the definition of prime element in an integral domain R . Find all the prime elements in $\mathbb{C}[t]$

Defn: If p divides ab , then p divides a or p divides b .

(or, $R/(p)$ is an integral domain)

$\mathbb{C}[t]$ is PID, so any prime element is also an irreducible element.

$f(t)$ is irreducible if and only if $\deg f(t) = 1$.

so $f(t) = at + b$. $a \neq 0$.

8. (12 points) Prove that $\mathbb{Z}[i]/(3)$ is a field.

$$\mathbb{Z}[i]/(3) = \mathbb{Z}[\bar{x}]/(x^2+1, 3)$$

$$= \mathbb{Z}[\bar{x}]/(3) / (x^2+1)$$

$$= \mathbb{F}_3[\bar{x}]/(x^2+1)$$

Since

$$0^2+1 \neq 0, \quad 1^2+1=2, \quad 2^2+1=1.$$

So

$f(x) = x^2+1$ has no degree-one divisor in $\mathbb{F}_3[\bar{x}]$.

So $f(x)$ is irreducible

This implies that (x^2+1) is a maximal

ideal in $\mathbb{F}_3[\bar{x}]$, so $\mathbb{Z}[\bar{i}]/(i+3)$ is a field.

9. (12 points) Let $f = x^3 + x^2 + x + 1$ and let α denote the residue of x in the ring $R = \mathbb{Z}[x]/(f)$. Express $(\alpha^4 + \alpha)(\alpha + 1)$ in terms of the basis $(1, \alpha, \alpha^2)$ of R .

$$(\alpha^4 + \alpha)(\alpha + 1)$$

$$= \alpha^5 + \alpha^4 + \alpha^2 + 1$$

$$= \alpha^2(\alpha^3 + \alpha^2 + \alpha + 1) - \alpha^2 \cdot \alpha^2 - \alpha^2 \cdot \alpha - \alpha^2 \cdot 1 + \alpha^4 + \alpha^2 + 1$$

$$= -\alpha^3 + 1$$

$$= -(\alpha^3 + \alpha^2 + \alpha + 1) + \alpha^2 + \alpha + 1 + 1$$

$$= \alpha^2 + \alpha + 2$$
