Visualize nodal set.

A corresponds to frequency.

The same frequency may corresponds to multiple eigen states.

Solution to wave equation Utt = OU.  $\psi_n(x,y) \cdot (Grs \sqrt{n} + t(2 sin \sqrt{n} + 1)$ 

Nodal set (nodal curve in 20)
is the set of zeros of pn (x, y)

Set the link of graphs, videos and codes on our subsites for visualiting nodal sets using sand or salt on a drum.

Last time:

$$\lambda_{1}(1)) \sum_{i=1}^{n-2}$$

Let's use seperation of variables to solve  $\psi(r, \theta) = f(r) \cdot g(\theta)$ 

$$\frac{1}{r}(rf'(r))' g(\theta) + \frac{1}{r^2} f(r) g'(\theta) = -\lambda fg$$

$$\frac{r(rf'(r))'}{f} + \frac{g''(\theta)}{g(\theta)} = -\lambda r^2.$$

$$\frac{r(rf')}{f} + \lambda r^2 - \frac{g''}{g} = \mu$$

Mis constant

$$\begin{cases} g'' = -\mu g \\ g(-7) = -g(7) \\ g'(-7) = -g'(7) \end{cases}$$

$$M^{-}h^{2}$$
,  $g(\theta) = \begin{cases} \sin n\theta \\ \cos n\theta \end{cases}$ 

Solution, but not regular.

$$p(r)=r, \quad q(r)=\frac{h^2}{r}, \quad \sigma(r)=r$$

$$p(s)=\sigma(s)=0, \quad q(0)=r-\omega.$$

Try to solve  $(x)$ 

Analogue:  $\phi'(x)+1$   $\phi(x)=0$ 

Change of variable:

$$q=\int_{0}^{2} x^2 = h(x) \frac{d\theta}{dx}, \quad d\theta = \frac{d\theta}{dx} \cdot \frac{d\theta}{dx} = \frac{d\theta}{dx}$$

$$\frac{d^2\theta}{dx^2} = h(x) \frac{d\theta}{dx}, \quad d\theta = \frac{d\theta}{dx} \cdot \frac{d\theta}{dx} = \frac{d\theta}{dx}$$

$$\frac{d^2\theta}{dx^2} = h(x) \frac{d\theta}{dx}, \quad d\theta = \frac{d\theta}{dx} \cdot \frac{d\theta}{dx} = \frac{d\theta}{dx}$$

$$\frac{1}{\sqrt{12}} + \phi(7) = 0. \leftarrow \text{epartian not}$$
involving  $\gamma$ .

$$C_1 = 0 \leftarrow \phi(0) = 0$$

$$\sin (\int_{\Lambda} L) = 0 = 0 = 0 \int_{\Lambda} L = n\eta$$

$$= 0 \int_{\Lambda} -(\frac{n\eta}{L})^{2}, n = 1, 2, \dots$$

Back to (x):

$$r^{2}f'' + rf' - n^{2}t \lambda r^{2}f = 0$$

1 des

- Thange of variable to obtain some "standard" ODE (not involving 2)
- D Solve the "standard" ODE by inventing new names.

- 3) Study the behaviour of the new functions
- (F) Combine with boundary conditions to obtain the possible ligar values 1.

$$\frac{\partial f}{\partial r} = \frac{\partial f}{\partial t} \cdot \frac{\partial t}{\partial r} = \int_{\Lambda} \frac{\partial f}{\partial t}$$

$$\frac{\partial^{2} f}{\partial r^{2}} = \lambda \frac{\partial^{2} f}{\partial t^{2}}$$

$$r^{2} \cdot \lambda \frac{\partial^{2} f}{\partial t^{2}} + r \cdot \sqrt{\lambda} \frac{\partial f}{\partial t^{2}} - n^{2} f + \lambda r^{2} f^{2} = 0$$

$$(**) \frac{\partial^{2} f}{\partial t^{2}} + \frac{\partial^{2} f}{\partial t^{2}} + \frac{\partial^{2} f}{\partial t^{2}} - n^{2} f + \frac{\partial^{2} f}{\partial t^{2}} = 0$$

$$has no \lambda$$

(2) (all (\*\*) bessel equation.

(\*\*) has two solutions

Th (?) Bessel function of 1st kind

Yn 1?) Bessel function of

Behaviour of Bessel functions as 2-2 to

2<sup>2</sup>f"+2f+(-n<sup>2</sup>+2<sup>2</sup>)f=0

7
2(nuge - 2<sup>2</sup>.

Ind kind.

$$\frac{2^{2}f''+2f'+2^{2}f=0}{2^{2}}$$

Compare with  $2^2 f'' + 2^2 f = 0$ Solution to f'' + f = 0 $f = C_1 Sin 2 + C_2 los 2$ 

Ja, In are like sin, cos
having infinikly many zeros

as 7 -> +00.

2-0, equation (4\*) is  $2^{2}f''+2f'+(h^{2}+2^{2})f=0$   $5mall compare to
<math display="block">h^{2}$ 

Compare with

$$\begin{aligned}
 & 2^{2}f'' + 2^{2}f' - n^{2}f = 0 \\
 & equ: dimensional & ode \\
 & f = 2^{6}, \\
 & f(p-1) + p - n^{2} = 0 = p = 2n, \\
 & f(x) = 2^{n} & or 2^{-n}
\end{aligned}$$

$$\begin{aligned}
 & n = 0, & f = \log 2 & or 1. \\
 & n \neq 0, & f = \log 2 & or 1.
\end{aligned}$$
As  $2 \rightarrow 0$ ,  $7 \wedge (7) \rightarrow 2^{n} \quad n \neq 0$ 

$$& f = \log 2 \quad or 1.$$

$$\begin{aligned}
 & f = \log 2 \quad or 1.

 & f = \log 2 \quad or 1.
\end{aligned}$$

$$\begin{aligned}
 & f = \log 2 \quad or 1.
\end{aligned}$$

Grajohs

From 
$$(f(0)) | < +\infty$$
.  
 $f(7) = \int_{N} (x) = \int_{N} (\sqrt{N} r)$   
 $r = | 2 \rangle$ ,  $f(R) = 0$ , this implies  
 $\sqrt{N} R = \frac{2}{7} n m$ , one of the terms  
so  $\lambda = (\frac{2}{10} n m)^{2}$ .

Summary: 
$$f(r) = Jn\left(\frac{7nm}{12}r\right)$$

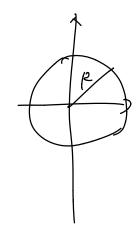

$$n = 0,1...$$

$$m = 1,2,...$$

$$\frac{1}{2} \ln \left( r, \theta \right) = C_1 \int_{\mathcal{H}} \left( \frac{9nm}{10} r \right) \cos n \theta \\
+ C_2 \int_{\mathcal{H}} \left( \frac{2nm}{10} r \right) \sin n \theta$$

even though this not Orthogonality regular, but the proof for orthogonality does not depend on regularity  $\left( \int_{\Gamma} n \left( \frac{7hm}{R} r \right), \int_{\Gamma} n \left( \frac{tnk}{R} r \right) \right)$  $= \int_{0}^{K} \int_{n} \left(\frac{t_{nm}}{k}r\right) \cdot \int_{n} \left(\frac{7nk}{R}r\right) \cdot r \, dr$ = 0 if m + k. If  $\sum_{m=1}^{+\infty} a_m J_n\left(\frac{\partial a_m}{\partial x}r\right) = f(r)$ then  $a_m = \frac{\int_0^R f(r) \cdot \int_n \left(\frac{7s_m}{R}r\right) r dr}{\int_0^{12} \left(\int_n \left(\frac{7s_m}{R}r\right)\right)^2 r dr}$ 

Wave equation on 20 disc Example:

U(n8,t).

$$Utt = C^2 \Delta u$$

$$U(12, 0, t) = 0$$
 BC

$$\begin{cases} U(r,\theta,0) = f(r,\theta) \\ U_t(r,\theta,0) = g(r,\theta) \end{cases} TC_S$$

$$|U_t(r,0,0) = g(r,0)$$

seperation of variables

U(r,0,t)= \$ (r,0). 6 (t)

$$\frac{\Delta \phi}{\phi} = -\lambda = \frac{G'(t)}{C^2 G(t)}.$$

(, 1+) = Gsin (V) (V) + (2 60) (V) (V)

$$U(r,\theta,t) = \sum_{n=0}^{\infty} \sum_{m=1}^{\infty} A_{nm} \cdot J_{n}(\frac{t_{nm}}{2}r) \cdot \omega_{n} d\theta$$
